

Profile

I'm a resilient and creative individual who produces many types of digital media to create lasting, positive change.

My interest in technology sparked from the iPad my parents gifted me when I was nine years old and the family computer. **I used them to learn programming languages and creative media skills through online communities.**

I know several programming, scripting and database languages: **HTML, CSS, JavaScript, Python, SQL, PHP and Ruby**. I've used these skills to bring value to others in ethical organisations and political campaigns. **My work is defined as a proficient organiser who is efficient and delivers quality work.**

Outside of my passion for technology, I am enthusiastic about helping people and building connections.

As Assistant Head Student at The Sheffield College Sixth Form Student Council, **I manage Council meetings, assign tasks to a team of seven deputies, organise events (often with a charity focus) and liaise with teachers and students.** I've also had the opportunity to talk to prospective students and present the welcome presentation on Open Evenings.

Education

A Levels at The Sheffield College September 2021 - August 2022 (Predicted Grades): Politics - A, Computer Science - A, Media Studies - B
GCSEs at Tapton School August 2021: 9 GCSEs including Maths - 5, English Lang/Lit - 6, Computer Science - 6

Work Experience

Social Media & Communications: Crookes & Crosspool Labour Party - Developing websites and social media

(June 2021 - Present) // Volunteer Work

I use video, audio and code to create social media and web content for Crookes and Crosspool Labour Party's social media channels. **During my time in this role, I co-ordinated the successful digital campaign for Minesh Parekh for City Council which won on a mandate of 37.5%**

- I acquired responsibility for all stages, from coding the website and SEO to designing branding, filming campaign material and posting social media posts.
- The website was built from the ground up for accessibility using **HTML, CSS, SCSS, JS and Ruby**. A static site generator called **Jekyll** acted as the backend, as it's known for **fast compilation, serving speeds, and low maintenance costs.**
- The website **digitalised analogue campaign tactics**, allowing **55+ volunteers** from across the city to sign up and get involved.
- By the end of the campaign, the social media posts gathered **86,000+** engagements across all social media platforms.
- Crookes & Crosspool elected Minesh Parekh by a mandate of **37.5% (+4.8)**, one of two Labour gains in Sheffield of the night.
- The experience of co-ordinating a significant part of a political campaign, alongside balancing my first year of A Level, gave me the **organisational, problem-solving and communication skills** vital when working under a fast-paced organisation.

Computer Science A Level Project: Luna Task Management Application

(2022) // Computer Science A Level Coursework

My A Level Computer Science coursework is a gamified task management web application called Luna Planner that centres around a virtual cat.

- **I conducted focus group and surveys with the target stakeholders** during the idea generation phase, interviewing seven students.
- Before the coding phase, I designed the software structure by creating **UI prototypes, developing database relationships and planning classes.**
- The final application runs on web technologies: **HTML, CSS, PHP, SQL and JavaScript** to ensure it's accessibility across devices.
- It features a points-based badge system and user accounts.

Digital Media Assistant: Sheffield City Council: Graphic Design and Video Creation

(June 2022 - December 2022) // Unpaid Placement

During my Sheffield City Council placement in June 2022, I was Digital Media Assistant for the Employment and Skills Service.

- I produced video case studies for job fairs, designed posters and managed event promotion on Eventbrite.
- **I worked effectively across three teams**, delivering on time and creating shared folders where peers could upload clips and resources.

Skills

Programming, Database and Markdown Languages

HTML, CSS, JavaScript, Ruby, Python, SQL
